**Egypt. Annual Report for 1950.**

This is just to hand. During the year 783 new patients with leprosy presented themselves, making a total of 12,484 recorded since leprosy control began in 1929. There are 974 patients in segregation in the Abu Zaabal (637) and Amira (284) colonies and in annexes to the five clinics. Hydnocarpus oil was still the main treatment, but a beginning was being made with "Sulfa compounds."
