

*“De Diffuse Lepra Van Lucio en Latapi”* (Diffuse Leprosy of Lucio and Latapí) is a valuable monograph of 250 pages by J. H. FRENKEN of Rotterdam. There are many illustrations. The main text is in the Dutch language but a summary is given in English on pp. 234–239. An excellent bibliography is given on pp. 240–248. This monograph carefully systematizes and records the present knowledge and opinions on the Lucio phenomenon and is so important that we hope an English and a Spanish version can be issued.
