

### ***Atlas of Leprosy; the Sasakawa Memorial Health Foundation, Japan***

Following the first edition or issue of the 'Atlas of Leprosy' by SMHF, a revised and expanded version is now available. This is dedicated to the late Dr Ricardo Guinto of Cebu, the Philippines, and contains the series of 40 clinical pictures of patients from that country, representing almost all aspects of the disease, including reactions, together with 32 pictures of leprosy histopathology, prepared by Dr Abalos. In addition, there are also 18 clinical pictures to illustrate some of the problems in differential diagnosis. Our understanding is that this atlas will be distributed to selected training centres, libraries and some medical schools, and as is traditional with this Foundation, the priority countries may be those of the Far East in which they have had a particular interest. Dr Yo Yuasa indicates however, that individuals with a bona fide interest in leprosy and its histopathology may apply for copies. Address: Sasakawa Memorial Health Foundation, the Sasakawa Hall, GF, 3-12-12 Mita, Minato-ku, Tokyo 108, Japan.
